Abstract

25. Your friend says that a person with a head-on-brain injury (cerebral contusion) would never be able to walk again. Is this true? Why or why not? Explain.

Table 1. *IL-1* and *IL-6* mRNA expression in the liver of rainbow trout. The fish were divided into four groups: (1) control (C), (2) *IL-1* (100 ng/kg), (3) *IL-6* (100 ng/kg), and (4) *IL-1* + *IL-6* (100 ng/kg each). The fish were sacrificed 24 h after injection. The liver was removed and total RNA was extracted. The amount of *IL-1* and *IL-6* mRNA was determined by Northern blot analysis. The results are expressed as the mean $\pm$ SD of three independent experiments. The significance of the difference between the control and the treated groups was determined by Student's *t*-test. $P < 0.05$ was considered significant.
